Hardware

Stanley Security Solutions

Stanley Security Solutions Inc. of Indianapolis added the IDH Max 1300 to its line of electronic access systems. IDH Max can be used in cylindrical or mortise lock applications. The system combines formerly separate components—push buttons, door contacts, electric strike—in one unit, with only the lockset visible at the door. IDH Max is available with technology for magnetic stripes or proximity card readers, with reader technology located in the lockset escutcheon. The lock can be used in interior and exterior applications and is listed by Underwriters Laboratories for electrically controlled single-point locks or latches. 317/849-2250 | www.stanleysecuritysolutions.com

Seco-Larm

Seco-Larm U.S.A. Inc. of Irvine, Calif., developed the E-941SA-80 miniature electromagnetic lock for small, low-security doors. Designed for use in applications such as cabinets and drawers, the lock features dual voltage operation and has a holding force of 80 pounds. The lock measures

Wikk Industries

Wikk Industries Inc. in Greendale, Wis., developed and manufactured the Ingress'r switch for handi-capped accessible doors. The switch is 6 inches wide by 36 inches tall with a fully actionable center column, allowing switch activation from any height or angle. It has a tapered design and is available with a range of finishes, legends and engravings. The switch complies with the U.S. Americans with Disabilities Act and similar guidelines in Canada.

GSG International

GSG International S.p.A., part of the Giesse Group of Italy, launched the Flash XXL counter-fitting hinge for high-performance doors. The hinge features the Euro groove profile and has a maximum load of 352 pounds. Adjustments after installation are easy, according to a company release. A range of finishes are available. +39-051-8850500 | www.giesse.it

Flash XXL

Mayflower Sales, Adams Rite

Officials from Mayflower Sales Co. of Brooklyn, N.Y., announced the company will carry the new 4900 Series Grade 1 ANSI/BHMA Panic Exit Hardware from Adams Rite Manufacturing Co. of Pomona, Calif. Features of the 4900 Series include a ½-inch reversible brass latch bolt, a corrosion-resistant steel case, cylinder backsets and stainless steel auxiliary latch pins. Clear, dark bronze or black anodized finishes are available.

BF Kinsey

BF Kinsey Design Engineering of Beaufort, S.C., introduced a hung window sash tilt-limiting device. The Tilt Limiter protects users by limiting the distance sashes can fall inward, but won't interfere with normal window operation and sash removal, according to a company release. The device uses a spring wire and injection molded anchoring pivot slides to limit sash movement and is available for traditional 3¼-inch jamb double-hung aluminum windows. To install, the anchor for Tilt Limiter slides into the main frame jamb, while the other end is secured by a screw to the sash stile.

Adhesives and films

Hüper Optik

Houston's Hüper Optik USA launched a line of films for its Traditional Series: Traditional Dual Reflective 15, 30 and 40; Traditional Silver 15 and 35; and Traditional Bronze 20 and 35. The films offer energy savings in residential and commercial applications, according to a company release. The reflective films consist of a clear, polyester layer laminated to a reflective, aluminum layer. The line is available in 100 linear feet in all sizes and is backed by Hüper Optik's warranty programs.
